Hi All,

Attached are some visuals on the ADA.

Rick Grabowski (USACE) gave us a blow up of the EM-61 map of the ADA. They are the 1st & 2nd attachment.

The 3rd has the same maps, but I drew the sites on them. The sites were 1st identified in 1990 by Dames & Moore. I put an asterisk next to the sites that have been remediated during the soils project. Site 19 looks huge, but they only cleaned the soils for a few small areas, which they call 19A, 19B...19F. Next to the site number I put the acreage. We don't have a scale on these pics, but site 19 is in the northern part and it's about 50 acres, so that whole northern section looks to be about 100 acres.

The 4th attachment is the 1990 map with all the sites on it.

The last attachment is a description of the sites.

So, this tells us a lot. For example site 57I is described as OB/OD pits and you can see the pits on the map. Sites 18 and 56 are dunnage and you can see them separate from the rest of the sites.

Hope this helps...
